Research Interests

Current PhD student in Applied and Computational Mathematics with research interests in molecular dynamics, stochastic simulation, non-equilibrium thermodynamics, diffusion generative models, and the intersection of statistical mechanics and machine learning.

Education

2025–Present **PhD Student in Applied and Computational Mathematics**, *The University of Edinburgh*

Supervisors: Prof. Benedict Leimkuhler and Dr. Nikolay Malkin.

Research focus: Non-equilibrium thermodynamics, thermostats, and diffusion-based generative models.

2024–2025 **MSc in Statistical Science**, *The University of Oxford*

Qualification: Distinction.

Dissertation: *Score-Based Diffusion Models for Protein Backbone Generation* (Supervisor: Prof. George Deligiannidis, GitHub: github.com/Yuanhao-JIANG/protein-backbone-diffusion).

2020–2024 **BSc (Hons) in Mathematics and Statistics**, *The University of Edinburgh*

Qualification: First Class Honours, average grade 86 (ranked 1st of 71 students).

Dissertation: *Score-Based Diffusion Techniques and Diffusion Map Method for Generative Modeling* (Supervisor: Prof. Benedict Leimkuhler).

Research Experience

Summer 2024 **Summer Research Student**, *The University of Edinburgh*

Applied constrained SDEs in score-based diffusion models to restrict the data points on Riemannian manifolds, potentially allowing more structural and controllable data perturbation and data generation.

Summer 2023 **Summer Research Student**, *The University of Edinburgh*

Applied innovative approaches, especially the Leimkuhler-Matthews discretization method, for solving SDEs, to both the perturbation process and denoising process. Compared sample quality and training efficiency with traditional numerical SDE solvers including the Euler-Maruyama method, the Milstein method, the stochastic Runge-Kutta method and so on. Embedded the diffusion coefficient function in perturbation SDE with spatial information to allow potentially higher perturbation flexibility.

Summer 2022 **Summer Research Student**, *The University of Edinburgh*
Constructed interactive environment to model specific quantitative finance scenario. Implemented various model-free algorithms, including Actor-Critic, REINFORCE, and Proximal Policy Optimization (PPO), to train our pricing policy. Compared different algorithms for training efficiency and effectiveness. GitHub: github.com/Yuanhao-JIANG/RL-in-QF.

Technical Skills and Languages

Software Python, PyTorch, R, Java, C, Haskell, HTML/CSS, ...
Language English (professional), Chinese (native), Swedish (Elementary).

Awards and Scholarships

- 2025–2029 School of Mathematics Studentship, the University of Edinburgh.
- 2024 Lawley Memorial Prize, the University of Edinburgh. Awarded to the candidate with the most distinguished performance in the final degree examinations of the joint honours degree in Mathematics and Statistics.
- 2023 School of Mathematics College Vacation Scholarship, the University of Edinburgh.
- 2023 Arthur Erdelyi Prize for distinguished performance in the Degree Examinations for Mathematics, the University of Edinburgh.
- 2023 James Ward Prize for distinguished performance in the Degree Examinations in Mathematics & Statistics, the University of Edinburgh.
- 2022 School of Mathematics College Vacation Scholarship, the University of Edinburgh.

Other Experience

- Summer 2023 **London Mathematical Society Undergraduate Summer School**, *The University of Edinburgh*
Consists of a combination of short lecture courses with problem-solving sessions and colloquium-style talks from leading mathematicians, covering various fields of mathematics including probability theory, statistics, information theory, complex analysis, mathematical physics, computational number theory, Uncertainty quantification for computer models and so on.
- 2021–2022 **Careers Service Assistant (Part-Time)**, *Careers Service, The University of Edinburgh*
Managed the University's Careers Service WeChat account, reaching over 1,500 students annually. Coordinated onboarding for new students and maintained alumni engagement groups. Shared job opportunities and career events. Liaised with employers and developed employer networks to improve the quality and timeliness of career information.
